

Web-based Timesheet Management Solution

Intertec TimePro In-house is an "off-the-shelf" application that you purchase and install on your own web server as either an Intranet or Internet web site.

TIMEPRO+ IN-HOUSE IS IDEAL FOR:

- Businesses looking for an in-house timesheet solution available via the web, where timesheet information is stored locally.
- Medium to large businesses or government departments that require the extra security and control that can only be obtained by running a system on your own network.
- Businesses requiring advanced integration with other internal business systems.
- Any business looking for a professional and easy-to-use timesheet management system installed locally.

TESTIMONIAL:

"TimePro has made a huge difference to our business. We used to have little visibility of how things were tracking during the month and were losing the capture of time due to an inefficient and clunky system. We are wrapped with TimePro.

When we were searching for a Timesheeting product, our credentials were that it must be SQL Server based, simple to use and accommodate the complexity of a company recording both billable and non-billable time.

We have found TimePro a great cost effective and easy to use product, everyone in our organisation, from our Office Manager to our Managing Director records their time in TimePro"

Shafraz Nasser - Business Mechanix

TIMEPRO IN-HOUSE PRODUCTS:

1. TimePro In-house Product:

- Available as download on our web site.
- Product price includes first year's annual support and maintenance fee.
- Optional annual maintenance fee of 20% of purchase price entitles you to on-going technical product support and software upgrades.
